

Top Five Reasons Bocada Centralized Manager Enhances Microsoft DPM 2007

Microsoft's DPM 2007 is changing the way organizations protect Microsoft workloads. Microsoft has taken advantage of tight integration with their own applications, revolutionizing the way businesses approach data protection by utilizing state of the art protection methods and focusing on recovery point objectives. It is no wonder DPM 2007 is the preferred data protection solution for Exchange, SQL and SharePoint.

However, the rapid uptake of DPM 2007 in large enterprise customers has exposed a need for more comprehensive centralized monitoring and real time management of the DPM servers that is not offered today by Systems Center Operation Manager solutions.

Bocada has developed an agentless, web based centralized management console that addresses the key management needs of operations teams and management alike. Bocada CM for DPM 2007 addresses management gaps and enhances the overall usability of DPM 2007 in medium to large scale deployments.

(1) Simplifies DPM Management

- a. Manage all DPM 2007 Servers from a single web based console
- b. Monitor, troubleshoot, modify and maintain DPM 2007 activity with minimal effort

(2) Helps Reduce Administrative Costs

- a. Simplified management reduces administrative tasks
- b. Easy user interface requires minimal training – no knowledge of writing Powershell scripts necessary

(3) Eases Transition to DPM by Simplifying Administration and Management

- a. Manage all DPM servers from one central console
- b. Eliminates need for multiple wizards for each management action

(4) Accelerates Implementation and Rollout Times

- a. Dashboard views provide quick view into entire environment, with easy drill down for troubleshooting
- b. Make all modifications and track changes from central console

(5) Enhances System Center Operations Management Functionality

- a. Provides more detailed views and insight from one console
- b. No need to switch back and forth between SCOM and DPM consoles
- c. No need to install agents on every DPM server.
